

Martel Paper - Daily OA Pain

2024-03-16

Data Wrangling

```
## Load packages
library(tidyverse)
library(ggplot2)
library(tidyr)
library(haven) ## This library provides functions to read sav file into R
library(lme4)
library(lmerTest)
```

```
## Read data
data_paper <- read_sav("Dataset; 2024.1.sav")
checkdf3 <- data_paper |>
  subset(ID == 2072) |>
  select(c(ID,
           Level1_Even_DateIn,
           Level1_Even_TimeIn))
```

Adjusting Wave Day

- DT_i combines D_i and T_i : 'DateTime' variable
- DT_0 is the first response 'DateTime' for each patient
- W_i is the adjusted 'Wave_Day' variable
- Add a grace period G for calculating the adjusted W_i , in our case $G = 6$ hours
- Calculate the datetime difference H_i in **hours** from the first response, incorporating the grace period:

$$H_i = DT_i - DT_{i-1}$$

- Then apply the grace period indicator I_i :

$$I_i = \begin{cases} 1 & \text{if } H_i \leq 24 + G \\ \left\lceil \frac{H_i - G}{24} \right\rceil & \text{otherwise} \end{cases}$$

- The initial response for ‘Wave_Day’ is 1, i.e., $W_0 = 1$, then the adjusted ‘Wave_Day’ W_i is

$$W_i = \sum_{i=0}^{i-1} I_i$$

```
## Consecutive Days - Grace Period 6 hours
data_paper <- data_paper |>
  mutate(Lev1_DateTimeIn = as.POSIXct(strptime(paste(Level1_Even_DateIn,
